Use appropriate levels of precision when calculating with measurements.<br><br>8. Find the sum of the interior and exterior angles of regular convex polygons with and without measuring the angles with a protractor.<br><br>10. Use conventional formulas to find the surface area and volume of prisms, pyramids and cylinders and the volume of spheres and cones to a specified level of precision. |   |  |
| F. Write and solve real-world, multi-step problems involving money, elapsed time and temperature, and verify reasonableness of solutions.      | 6. Solve and determine the reasonableness of the results for problems involving rates and derived measurements, such as velocity and density, using formulas, models and graphs.  |   |  |

| B. Apply various measurement scales to describe phenomena and solve problems.            |            | 2. Use radian and degree angle measures to solve problems and perform conversions as needed.  |             |   |             |
| C. Estimate and compute areas and volume in increasingly complex problem situations.     |            | 3. Derive a formula for the surface area of a cone as a function of its slant height and the circumference of its base.<br><br>4. Calculate distances, areas, surface areas and volumes of composite three-dimensional objects to a specified number of significant digits. |             | 3. Apply informal concepts of successive approximation, upper and lower bounds, and limits in measurement situations; e.g., measurement of some quantities, such as volume of a cone, can be determined by sequences of increasingly accurate approximations. |             |
| D. Solve problem situations involving derived measurements; e.g., density, acceleration. |            | 5. Solve real-world problems involving area, surface area, volume and density to a specified degree of precision.   |             | 1. Solve problems involving derived measurements; e.g., acceleration and pressure.<br><br>2. Use radian measures in the solution of problems involving angular velocity and acceleration.   |             |
